

Dehradun Zoo

Diversion, Mussoorie Rd, Malsi, Dehradun, Uttarakhand 248009

Group: Swastika, Pratiksh, Samarth, Harshita & Aditya

● P1-Exists

Visual connection with nature - Aquatic World (Koi Pond)

A koi pond sits at the entrance of the aquarium. It gives people a sense of anticipation for what's to come and creates an immediate connection to nature. This aligns with biophilic design, fostering calm and curiosity.

- P2- Doesn't Exist

Non Visual connection with nature - Honey bee apiary

It is a honey bee apiary placed on a barren main path to another zoo exhibit. This encourages people to stay on the path rather than taking risky detours. Meanwhile, the bees will naturally pollinate the area, revitalizing what was once empty.

● P3- Exists

Non Rhythmic Sensory Stimuli - Aviary (birds chirping)

basically, the unpredictable bird chirps act as a quick mental refresh for the visitors. when people are walking around the dehradun zoo, these random bursts of sound grab their attention just for a split second, breaking their cognitive fatigue. it creates a raw, immersive vibe that grounds them, making the whole space feel super alive and instantly dropping their stress levels.

● P4- Exists

Thermal & Airflow variability -Snake (shadow and shade)

the sharp contrast between those bright sun patches and the deep shade visually proves there is a sudden temperature drop. when people walk through here, they physically feel alternating bursts of warmth and cool relief on their skin. this quick thermal shift wakes up their senses, stops the space from feeling flat or artificial, and keeps them grounded in a dynamic, natural environment.

● P5- Exists

Presence of Water - Ponds

random ponds along the tracks tap into deep evolutionary comfort. the sudden glimpse of water—its reflections and ripples—grabs focus without draining energy. it acts as a mini mental escape that naturally lowers heart rates and makes the walk feel like a genuine discovery.

● P6- Exists

Dynamic & Diffuse lights - Daylight from multiple angles

as people walk through, these changing light levels stop the space from feeling artificial or stagnant. it subconsciously connects them to the time of day and the outdoors, keeping them visually engaged and comfortably alert without overwhelming their senses.

● P7- Exists

Connection with Natural Systems- Animal Behaviors

watching animal behavior is exactly it. seeing them interact, play, or even just rest grounds people in the reality of a living ecosystem. it shifts their focus away from rigid, man-made routines and plugs them straight into the unpredictable rhythms of nature, making them feel connected to a much larger, breathing world.

- P8- Doesn't Exist

Biomorphic Forms & Patterns- window details

seeing these organic shapes and subtle fibonacci spirals instantly puts the brain at ease. because the design mimics the underlying math of nature, people process the visual information effortlessly instead of feeling drained by rigid, artificial grids. it turns a standard building into a space that feels deeply intuitive and naturally restorative to look at.

● P9- Exists

Material Connection with nature -Stone work

the rough texture and solid presence of those stone walls instantly tie people to the local geology. seeing or touching these unpolished, natural materials grounds them, making the space feel authentic and deeply rooted rather than synthetic. it gives off a comforting sense of permanence that artificial materials just can't fake.

● P10- Doesn't Exist

Complexity & Order - window details

Watching these incredibly complex, recursive light and shadow shapes—precisely mirroring the fractal patterns of the roof—play across the paved path instantly creates a deep sense of complexity and order. This specific visual complexity is what humans are subconsciously programmed to seek out. It's not boring like a simple repeating grid, and it's not chaotic; it's that perfect, satisfying natural balance that effortlessly grips the brain and reduces cognitive fatigue, making the walk feel both restorative and endlessly fascinating.

● P11- Exists

Prospect

having a long, clear view down this path perfectly captures prospect. it lets people subconsciously scan their environment and see exactly what's coming up next. this open line of sight strips away any feeling of being boxed in, instantly giving them a comforting sense of spatial control and safety as they move forward.

● P12- Exists

Refuge

that little shelter tucked away below the main path is a perfect example of refuge. dropping into that enclosed space with a solid roof overhead gives people a secure spot to step away from the crowd. it instantly lowers stress by offering a quiet, protected nook where they can safely rest and observe their surroundings without feeling exposed.

● P13- Exists

Mystery

this winding path disappearing behind the trees perfectly nails the concept of mystery. because you can't see exactly where it leads, it creates a subtle sense of anticipation that naturally pulls people forward. it invites exploration and keeps the brain engaged, turning a simple walk into an active discovery without making them feel anxious or lost.

● P14- Doesn't Exist

Risk/Peril

that sharp drop right at the edge triggers a quick hit of adrenaline, instantly waking up the brain. but because that sturdy railing is there, the danger is completely controlled. this mix of a perceived risk paired with a strong safeguard gives people a safe thrill, keeping them super engaged and making the spot unforgettable.

● P15- Exists

Awe

coming face-to-face with these massive, towering wooden figures completely stops you in your tracks. their sheer scale and intricate construction out of raw branches trigger a sudden, powerful sense of awe. it makes people feel small but entirely fascinated, instantly shifting their focus away from daily stress and plugging them into something that feels monumental and larger than life.
