Our problem

As a chasmish, this turned out to be the most apt

People who wear glasses experience discomfort **when lying on their side**, usually in bed or on a couch, because the frames press against the face and bend under the weight of the head.

Design a simple system that removes the discomfort of wearing glasses while lying on one's side, allowing users to rest comfortably without pressure from the frames.

User interviews

Questions we asked

1st- Hi there i love **your glasses, where did you get them?**

namaste bhaiya ji, cashme ka frame toh bdia lg raha hai apka

2nd - if you dont mind **can you answer few questions for me** , its for a survey on the glasses frame

3rd -Appreciate it gang, **whats our lens power?**

4th -so **do you have to wear it for longer periods of time?**

5th - if so, do you wear glasses while laying down on a couch or a bed while reading, watching +

6th -as a cashmish myself i find **it quite discomforting when i have to lay on my side while wearing glasses, is it the same for you or do you remove your glasses?**

7th -Does your frame break after lying down sideways?

8th -what annoys you the most while wearing glasses?

9th -any other problems you face?

10th- thank you so much for your time hope you have good day!

ideation

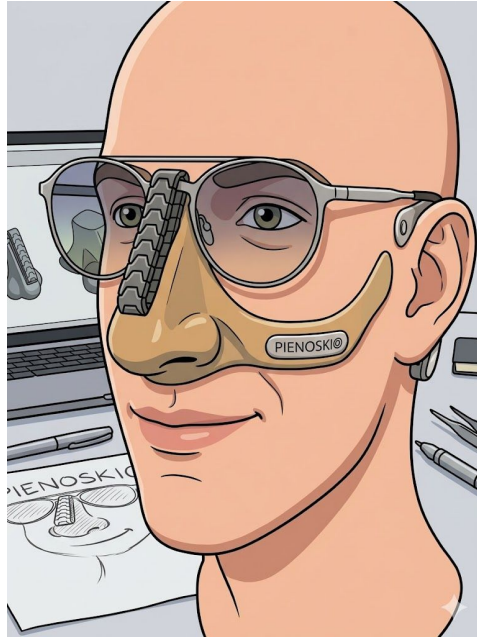

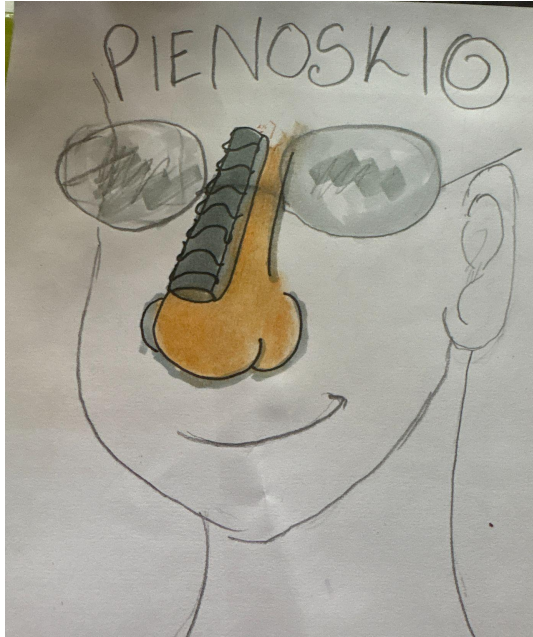

The 5 WHYs?????

The Problem: It hurts to wear glasses when you lie on your side in bed.

- **Why 1: *Why does it hurt?***
 - *Answer:* Because the side sticks of the glasses get squished between your heavy head and the pillow, digging into your face.
- **Why 2: *Why do they get squished?***
 - *Answer:* Because glasses have to stick out on the sides of your head to reach your ears, leaving a gap that gets crushed.
- **Why 3: *Why are they made to stick out like that?***
 - *Answer:* Because the companies that make glasses only design them for when you are standing up or sitting at a desk.
- **Why 4: *Why do they only care about standing up?***
 - *Answer:* Because if they made the frames super floppy and soft for bed, the glasses would look weird and wouldn't fold normally during the day.
- **Why 5: *Why hasn't anyone invented a fix for this yet?***
 - *Answer (The Real Reason):* Because the glasses industry thinks it's our own fault for being lazy and watching TV in bed, so they just ignore the problem
 - .

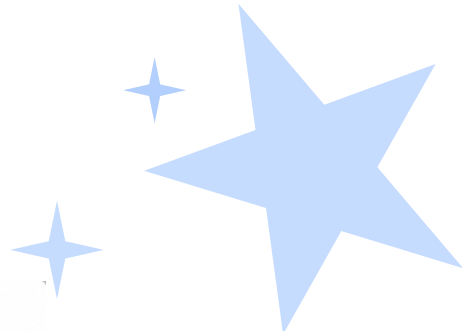

Our Conclusion: Since normal glasses companies refuse to fix the glasses, we decided to fix the user's face instead by inventing a motorized fake nose to push the glasses away.

Final concept

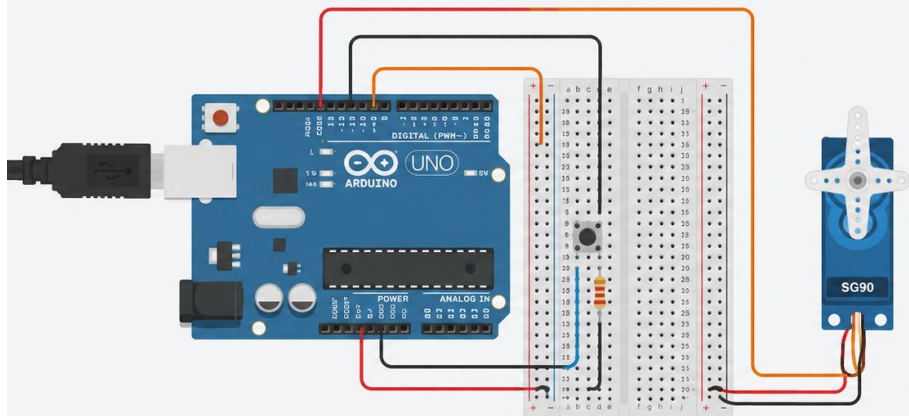

A fake nose add
on that you just
put on and watch
your glasses
adjust
accordingly!!!

Parts required

PINOSKIO – NOSE GLASS ADJUSTER ARDUINO + SERVO MOTOR CONNECTION

CONNECTIONS

- Servo Signal (Orange) → D9
- Servo VCC (Red) → 5V
- Servo GND (Brown/Black) → GND
- Button → D2
- Button Other Side → GND (via resistor)

- Arduino Nano
- SG90 Micro Servo Motor
- Force Sensitive Resistor (FSR) Sensor
- 3.7V LiPo Battery
- TP4056 Charging Module
- Mini On/Off Switch
- Jumper Wires
- Breadboard
- Resistors
- Silicone Fake Nose
- TPU Flexible Material / Rubber Grip Pads
- Thin Metal Wire Frame
- 3D Printed Housing Parts
- USB Cable for Arduino
- Hot Glue / Super Glue
- Small Screws & Mounts

How it works?

Get your pinoskio

And be lazy guilt free

TIRED OF GLASSES THAT DON'T STAY IN PLACE?

PINOSKIO

THE NOSE GLASS ADJUSTER

STOPS SLIPPING!

- KEEPS GLASSES SECURE
- COMFORTABLE FIT
- ONE SIZE FITS MOST
- EASY TO USE
- SOFT & FLEXIBLE

COMFORT THAT STAYS WITH YOU!

HOW PINOSKIO WORKS

- 1 RELAXING, JUST WATCHING TV...
- 2 GLASSES GET IN THE WAY. THEY BEND, MOVE UP AND CREATE DISCOMFORT!
- 3 INTRODUCING OUR HERO... **PINOSKIO** THE NOSE GLASS ADJUSTER
- 4 JUST CLIP PINOSKIO ON!
- 5 MAGIC! GLASSES AUTOMATICALLY SLIDE DOWN TO THE PERFECT COMFORT ZONE.
- 6 NOW YOU CAN WATCH TV EASILY. ALL DAY, EVERYDAY.

Secure Fit. ZERO SLIP. MAXIMUM COMFORT.

ONE SMALL CLIP. BIG COMFORT.

Flexible Spine Technology

PINOSKIO THE NOSE GLASS ADJUSTER

- Keeps Glasses Secure
- Comfortable Fit
- One Size Fits Most
- Easy to Use

PERFECT FOR DAILY WEAR

PERFECT FOR EVERY MOMENT!
